

Crime Against Women (India) — Combined Dataset Documentation

Source

Merged from 4 official-style crime statistics files, covering **2001–2025**, across **28 states + 10 UTs** (India's current State/UT structure, with historical entities preserved where they existed):

Source file	Years covered	Format	Crime categories
<code>crime_against_women_2001-2012.csv</code>	2001–2012	Wide (years as columns)	9 broad categories
<code>crime_against_women_2013.csv</code>	2013	Long (1 year column)	12 categories
<code>crcCAW_2014_1.csv</code>	2014	Long (1 year column)	40 categories (incl. detailed sub-codes)
<code>crime_against_women_wide_2015_2025.csv</code>	2015–2025	Wide (years as columns)	1 category (Total only)

Three output files were produced from this merge — pick whichever fits your analysis:

1. `combined_crime_against_women_full.csv` — everything, including 2014's detailed sub-categories and national/state/UT aggregate rows.
2. `combined_crime_against_women_analysis_ready.csv` — cleaned subset: real states/UTs only, standardized categories only. **Recommended starting point for most research.**
3. `crime_against_women_year_as_row.xlsx` — same analysis-ready data, reshaped wide (Year as rows, State/UT as columns), one sheet per crime category.

File 1: `combined_crime_against_women_analysis_ready.csv`

5,136 rows. Tidy/long format — one row per Year × State × Crime type.

Column	Type	Description
<code>Year</code>	int	2001-2025
<code>State_UT</code>	string	Standardized state/UT name (see naming notes below)
<code>Crime_Head</code>	string	One of 15 standardized crime categories (see list below)
<code>Count</code>	float	Number of reported cases. <code>NaN</code> = data not available/not yet published for that year
<code>Source_File</code>	string	Which original file this row came from — useful for tracing data provenance/methodology changes

Excludes: national/state/UT total rows (e.g. "All India"), and the 2014 file's fine-grained sub-categories (e.g. Custodial Rape, Stalking, Voyeurism) since those have no equivalent in other years.

File 2: `combined_crime_against_women_full.csv`

6,333 rows. Same as above plus everything that was filtered out, plus extra columns for full traceability.

Column	Type	Description
Year	int	2001-2025
State_UT	string	Standardized state/UT name
State_UT_Raw	string	Exact original label as it appeared in the source file (before standardization)
Row_Type	string	State/UT = an actual state/territory · Aggregate = a national/state-total/UT-total summary row
Crime_Head_Standardized	string	Standardized category name, or blank if this is a 2014-only detailed sub-category
Crime_Head_Raw	string	Exact original crime-head label from the source file
Is_Detailed_Subcategory	bool	True = fine-grained 2014-only breakdown (e.g. "1.1.2 - Custodial_Other Rape"); redundant with Crime_Head_Standardized being blank
Count	float	Number of reported cases. NaN = not available
Source_File	string	Originating file

File 3: crime_against_women_year_as_row.xlsx

Same data as analysis_ready, pivoted wide: rows = Year (2001-2025), columns = State/UT (38 total). One worksheet per crime category (15 sheets), "Total Crimes against Women" sheet first. Blank cells = missing data (not zero).

The 15 standardized crime categories

Category	Years available
Total Crimes against Women	2001-2025 (2023-2025 mostly unpublished)
Rape	2001-2014
Kidnapping & Abduction of Women	2001-2014

Category	Years available
Dowry Deaths	2001–2014
Assault on Women with Intent to Outrage Modesty	2001–2014
Insult to Modesty of Women	2001–2014
Cruelty by Husband or Relatives	2001–2014
Immoral Traffic (Prevention) Act	2001–2014
Indecent Representation of Women (Prevention) Act	2001–2014
Dowry Prohibition Act	2013–2014 only
Importation of Girls from Foreign Country	2013–2014 only
Commission of Sati (Prevention) Act	2013–2014 only
Attempt to Commit Rape	2014 only
Abetment of Suicide of Women	2014 only
Protection of Women from Domestic Violence Act	2014 only

Important for research design: only the first 9 rows above are consistently available across the full 2001–2014 span. From 2015 onward, the source data only reports the **Total** — individual crime-type breakdowns are not available in that period. So:

- If you want **category-level trend analysis** (e.g. "how has Rape changed over time"), your usable window is **2001–2014**.
- If you want the **longest possible time series**, use **Total Crimes against Women (2001–2022 fully reported)**.

Data quality notes

- **Missing values:** (NaN) in (Count) means the figure wasn't available/published — not zero. Concentrated in 2023 (33 rows), 2024 (39 rows), 2025 (39 rows, since NCRB hasn't published these yet), plus 5 scattered 2015–2019 rows.
- **State/UT naming standardized**, e.g.: "Delhi UT" → "Delhi", "A&N Islands" → "Andaman & Nicobar Islands".
- **Territorial changes over time** are preserved, not silently merged:

- Telangana only exists from 2014 onward (bifurcated from Andhra Pradesh).
- "Dadra & Nagar Haveli" and "Daman & Diu" are kept as **two separate UTs pre-2020**; the merged entity "Dadra & Nagar Haveli and Daman & Diu" only appears from 2015–2025 data as reported (their 2020 merger).
- Ladakh only appears from 2019 onward (separated from Jammu & Kashmir).
- Because of this, **don't naively sum a state's numbers across all 25 years** without checking for these entity splits/merges — you may double count or create false gaps.
- **Aggregate rows removed** in the analysis-ready file — national totals, state-total, and UT-total rows (labeled inconsistently in source data as "All India", "ALL INDIA K&A", "Total (All-India)", etc.) are excluded so they don't get mistaken for actual states. They're retained (flagged `Row_Type = Aggregate`) in the full file if you need official pre-computed totals.
- **No duplicate rows:** verified zero duplicate (Year, State, Crime Head) combinations in the analysis-ready file.
- **2014 is the most granular year** — it includes sub-category breakdowns (e.g., Custodial Rape, Stalking, Voyeurism, ITP Act sub-sections) not available in any other year. Useful for a detailed case study of that year, but not for trend comparison.

Suggested citation / methodology note for your research

This dataset was compiled by merging 4 differently-structured NCRB-style crime statistics releases (2001–2012, 2013, 2014, 2015–2025) into a single tidy format, standardizing state/UT names and crime category labels across releases. Category granularity and reporting completeness vary by year (see notes above) due to changes in how the source data was published, not due to underlying changes in crime definitions.
